CARO®TEC & CARO®ROD
A perfect pairing for standard & low vacuum casting

- Optimized cooling capacity
- Low wear plunger tip concept
- Complete solution from a single source
CARO®TEC

The CARO®TEC series has been developed for standard die casting and low vacuum. Different plunger tip designs are available depending on application.

- Selectable cooling capacity and stability
- Ideal material pairing and design
- Appropriate for low vacuum
- Only copper parts are in contact with shotsleeve
- Long lifetime less downtime

CARO®ROD

The plunger rod can optionally be equipped with integrated lubrication for the minimum lubrication devices.

- Optional with lubrication system for CARO®LUB
- Guide elements for override safety & alignment
- Optimized lubrication for improved casting quality

Compatible devices
