

Born of necessity during war years, C762 was developed to conserve nickel for national defense. Principally used for electrical relay springs and contact spring this alloy offers a unique combination of stiffness and strength required for such applications. Its work-hardening rate is high compared to other copper alloys which is especially valuable when the functional strength of a part must be raised during forming. C762 also offer an attractive nickel silver color that can be used in decorative applications.

Chemical Composition

Copper¹	57.0-61.0%
Nickel²	11.0-13.5%
Zinc	Remainder
Iron	0.25% Max
Lead	0.09% Max
Manganese	0.50% Max

¹ Cu includes Ag; Copper plus named elements = 99.5%

² Ni Values Include Co

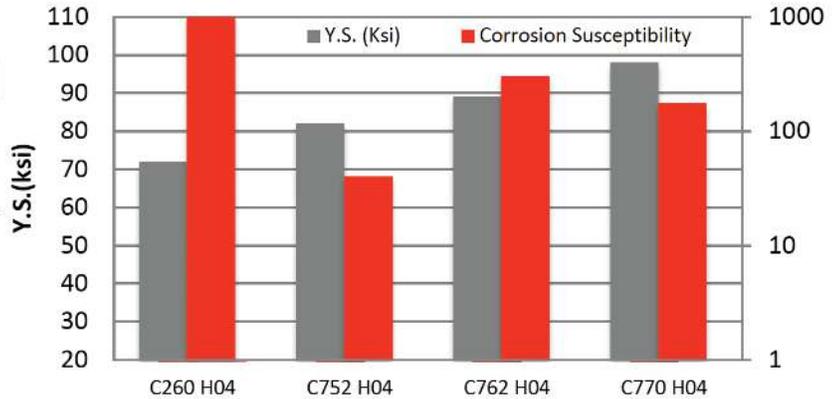

Figure 1: Comparison of Yield Strength and relative susceptibility to stress corrosion (Mattsson's solution and moist ammonia, 1000 = most susceptible).

Physical Properties

	English Units	Metric Units
Density	0.310 lb/in ³ @ 68°F	8.58 g/cm ³
Thermal Conductivity	24 BTU-ft/ft ² -hr-°F	41.5 W/m ² K
Electrical Resistivity	115 ohm circ mils/ft	19 microhm-cm
Electrical Conductivity (annealed)	9% IACS*	0.05 megamho/cm
Modulus of Elasticity	18,000,000 psi	124 kN/mm ²
Thermal Capacity(Specific Heat)	0.090 Btu/lb/F° @ 68°F	377.1 J/kg · °C @ 20°C
Coeff. Of Thermal Expansion 68-572°F (20-300°C)	9.0 PPM/°F	16.2 PPM/°C

*International Annealed Copper Standard
