### Subchronic/Chronic Toxicity:
No information for product.

### Carcinogenicity:
IARC lists cobalt and cobalt compounds as possibly carcinogenic to humans, Group 2B. In laboratory animal studies, chronic exposure to high concentrations of nickel has caused an increase in lung and nasal tumors. The International Agency for Research on Cancer (IARC) has classified nickel as possibly carcinogenic to humans, group 2B. The National Toxicology Program (NTP) classifies nickel as a known human carcinogen.

### Mutagenicity:
This product is not known or reported to be mutagenic. Nickel has been shown to be mutagenic in <i>in vitro</i> studies.

### Reproductive, Teratogenicity, or Developmental Effects:
This product is not known or reported to cause reproductive or developmental effects. Exposure of male rats to high concentrations of nickel caused testicular degeneration. However, symptoms of systemic toxicity, including severe weight loss, were also observed at the same concentrations indicating that the testicular effects were secondary to the frank toxicity.

### Neurological Effects:
This product is not known or reported to cause neurological effects.

### Interactions with Other Chemicals Which Enhance Toxicity:
None known or reported.

### Ecological Information

#### Ecotoxicity:
No data is available on this product. Individual constituents are as follows:

- **Copper:** The toxicity of copper to aquatic organisms varies significantly not only with the species, but also with the physical and chemical characteristics of the water, such as its temperature, hardness, turbidity and carbon dioxide content. Copper concentrations varying from 0.1 to 1.0 mg/L have been found by various investigators to be not toxic for most fish. However, concentrations of 0.015 to 3.0 mg/L have been reported as toxic, particularly in soft water to many kinds of fish, crustaceans, mollusks, insects, and plankton.

- **Nickel:** 96 hr LC<sub>50</sub>, rainbow trout = 31.7 mg/L; 96 hr LC<sub>50</sub>, fathead minnow = 3.1 mg/L; 72 hr EC<sub>50</sub>, freshwater algae (4 species): = 0.1 mg/L; 96 hr LC<sub>50</sub>, <i>Daphnia</i> = 0.51 mg/L
