

## Wieland reorganizes service centers in Germany

- Four service centers merged to form Wieland Metal Services Germany
- Bundling of product know-how
- New structure optimally serves individual customer requirements

The previously independent service centers Wieland Duro GmbH, Wieland SMH GmbH, Wieland Prometa GmbH and Wieland Fudickar GmbH have been merged to form Wieland Metal Services Germany GmbH. The sales network will be expanded by one additional location both in Eastern Germany and in Bavaria.

By bundling the capacities and product know-how of the service centers, customers will receive an even better service going forward. From now on, Wieland Metal Services Germany GmbH will be the single point of contact for all requirements relating to Wieland's wide range of copper and copper alloy products. The new company is part of the international Wieland Group and is therefore also an expert in all areas of metal processing. "The customers of Wieland Metal Services Germany will benefit from both our regional expertise and the many years of experience of the globally operating Wieland Group," explained Christoph Altrichter, Managing Director of Wieland Metal Services Germany GmbH.

Each of the four companies specializes in copper and copper alloy products and brings additional expertise in the field of special materials and aluminum to the group. "The merger of these four companies to form Wieland Metal Services Germany GmbH underlines our ambition to play a leading role in the trading sector in Germany," said Christoph Altrichter.

## About Wieland

Wieland is one of the world's leading suppliers of semi-finished copper and copper alloy products. With a global network of production sites, service, and trading companies, the company offers a broad product, technology, and service portfolio. From prototype to series production, Wieland develops solutions for automotive, electronics, refrigeration, air conditioning, and other industries. Wieland uses high-performance copper materials to drive the success of its B2B customers in future-oriented fields such as electromobility, connectivity, and urbanization. High technical competence, customer-oriented thinking, and sustainability determine their actions and have been the basis of the company's success since 1820.
